Chapter 5

1. Bookstore: REST

Use your own bookstore application from the GitHub.

Check StudentListREST example from the moodle

a.) Create REST service that return all books (JSON)
   a. Create a method to controller
   b. Ignore one-to-many link from JSON
b.) Create REST service that return one book by id (JSON)
   a. Create a method to controller
   b. Use path variable to get book id

Push all changes to GitHub

2. Bookstore: Spring Data REST

Use your own bookstore application from the GitHub.

Enable Spring Data REST by adding the dependency and the configuration to application.properties

Test different RESTful services (searching, adding…)
